Background to the evaluation (1page)

Context in which you are working – country and the local context where the program is implemented

Aim of data collection – baseline, midline or endline.

Explain the program implemented / to be implemented.

Goals, activities and timelines

Target group

Implementing partners

Methodology (1 page)

Sample size and sample selection

Write here what the sample size the evaluation had and how participants were selected to participate in the evaluation.

Limitations

What are some of the limitations with this evaluation? Challenges that you have had that might affect the result and the analysis?

Data analysis

Explain here what kind of analysis that you have undertaken and what results you will be presenting

- Percentages
- Means
- Changes
- Correlation analysis

RESULTS

Analysis of sample

Gender

Age

Disability

Response rates

Social class

Location

Educational levels

Status or change in outcome indicators

General health (Q1)

Life satisfaction (Q2)

Functionality (Q3a)

Access to care/help (Dependency) (Q7)

Reception of care/help (Q9d)

Access to services (Q10)

Affordability of services (Q12)

Quality of services (Q11)

Actions of Self-care (Q14)

Discussion

Inter-relate findings from the same data collection.

Inter-relate findings with data from the previous data collections, comment on changes in in different directions, e.g. if mean scores of in the main outcome indicators are going up or down between two data collections

Recommendations

Specific and realistic (based on findings) recommendation for:

- how to improve the programmes
- how this data can and will be used to advocate change in the community/ country
